

Advisory Service

The "Advisory Service" is a service offered by Packsys Global AG worldwide. This service involves our Field engineer specialist with visits to customers' factories, where their existing machinery undergoes for a comprehensive assessment.

What sets the "Advisory Service" apart from a standard audit, is the depth of insight it provides. Customers receive an exceedingly detailed machine overview, which proves invaluable for precise long-term maintenance planning. Each individual report is presented and discussed with the customer on-site.

Moreover, customers are provided with a dedicated machine report for their portfolio. This provides detailed insights into each assembly while also revealing potential upgrades, retrofits, and modifications based on machine type and availability, enabling targeted and efficient improvements.

Your Benefits

- Long-term benefits through the machine report.
- Targeted strategies for machine maintenance, service, and spare parts planning.
- Enhanced efficiency and cost control via streamlined and targeted maintenance.
- Comprehensive inventory of spare parts warehouse and potential areas for improvement.

Our proven expertise

- Introduction and Online Presentation.
- On-site Inventory Assessment of the Machine Portfolio with an Experienced Specialist.
- Thorough Assessment of the Condition of Each Machine.
- Comprehensive Inventory Assessment of Spare Parts Stock.
- Presentation of Conclusions.
- Final Report for Each Machine and Assembly.

Available for machines

Currently, this service is available for all packaging machines. In the future, it will also be extended to cover other machinery within the Packsys Global AG portfolio.
